

Big Cargo trailer line

The TFS trailer from the Big Cargo line is a perfect solution when transporting a wide variety of goods, and combines strength, functionality and protection from the weather. The structure of the trailer is based on sandwich panels with a polyester laminate for the outer and inner shell and thermal insulation provided by XPS Styrodur, which is highly resistant to moisture.

The TFS Big Cargo trailer is a versatile tool, which replaces traditional solutions such as tarpaulin or vans. Available as standard in white with lockable double door, with a locking bolt or ramp with aluminium panelling.

The TFS Big Cargo trailers feature a heavy-duty body with about 30 mm thick walls and roof in smooth white laminate and thermal insulation in XPS Styrodur. This makes the trailer ideal for protecting the goods being transported from moisture to ensure safety in all weather conditions.

Big Cargo trailer line

The TFSP from the Big Cargo line is a product that perfectly combines non-standard technical solutions with practical functional solutions, to meet the expectations of users both in terms of driving comfort and effective use of available space.

This model not only offers easier operation, especially by eliminating the wheels protruding outside the body of the trailer, but also boasts a improved visual design. In addition, this feature becomes a key asset when the trailer is equipped with a side hatch. It allows easier access to the cargo area by increasing the functional and practical use, while the wheels underneath the trailer will not be of any inconvenience.

Available as standard in white with double door with locking bolt, lockable or with a ramp with aluminium panelling.
